

NetSupport School 複数の先生が同時に生徒に接続する為の設定方法

NetSupport School では、クライアント PC の ini ファイル変更が必要です。

ini ファイル保存先(デフォルト)

32 ビット C : ¥ Program Files ¥ NetSupport ¥ NetSupport School

64 ビット C : ¥ Program Files (x86) ¥ NetSupport ¥ NetSupport School

メモ帳等のテキストエディターで Client32u.ini ファイル（または v12.50 以前の生徒の場合は Client32.ini）を開きます。

[Client]セクションに Shared = 1 という項目を追加して、ファイルを上書き保存します。

CKSINI.EXE を DL し、Client32u.ini ファイルと同じ場所に保存します。

Manually editing the Client32u.ini (Client32.ini) file

Jan 9, 2020 | NetSupport Manager, NetSupport School, Windows |

Last Updated On January 09, 2020 by NetSupport Technical Support ★★★★★

< Back

The Client Configuration file Client32u.ini (or Client32.ini for pre-v12.50 Clients) is a text file that contains the settings used by the Client to set the way it behaves. This file can only be used by the NetSupport Client if it contains a valid checksum value. If the Client Configurator is used to alter Client settings, the Client Configuration file checksum is automatically updated. However, if the Configuration file is edited manually, the checksum will not be valid, and the Client will report an error and fail to load.

A command line executable is provided to update the checksum for the Client Configuration file; this utility is called CKSINI.EXE.

You can download the CKSINI utility here:

[cksini.exe](#)

The CKSINI file needs to be placed in the same folder as the .ini file, by default this is located in:

NetSupport Manager
C:\Program Files (x86)\NetSupport\NetSupport Manager

NetSupport School
C:\Program Files (x86)\NetSupport\NetSupport School

Right click the CKSINI.EXE and select **Run as administrator**.
